If you turned Voice Assistant on by mistake, tap the switch until an outline appears around it, then double tap it to turn it off. Perform the same action for the OK button in the confirmation that appears. In Screen Reader you can turn on the voice assistant. This will mean that the tablet will speak to you when you tap any of the pictures or buttons. To enable this tap on the white circle to the right of voice assistant, it will turn blue to show it is now active. To turn it off tap that circle and it will return to white.

The visual enhancements allows you to change the colour & size of the fonts, the keyboard, buttons, magnify etc. Changing these can help you see what is on the screen better. To enable any of the options tap on the white circle to the right of the options, it will turn blue to show it is now active. To turn it off tap that circle and it will return to white. It is best not to try them all at the same time but one by one, use the tablet for a bit to see if that makes a difference if not turn it back off and try another.

The advanced settings allows you to get directly to your accessibility settings by pressing the volume or the power buttons. To turn this on tap on the white circle to the right, it will bring up a list of accessibility options tap on the white circle across of the ones

you want to turn on.

Different things will work better for different people & a little trial and error may be needed to get the settings perfect for you. My advice would be to do this alongside your digital buddy & just to change one thing at a time. See if that makes a difference before trying something else that way it is easier to keep track of what you have changed and what works for you and what doesn't
